(formerly Bangladesh, India, Sri Lanka, Thailand Economic Cooperation; Thailand)

Remittance

top in terms of foreign remittances as a percentage of GDP in 2016 (USD 6.6 bn.)

(Pew Research Center, World Bank report for 2016)

Supportive Neighbors

Major trading partners

Working together on trade deficit issues

Issues with Nepal's higher education

Multidimensional:

Population explosion

Lack of resources

Non participation of the private sector

Scarcity of qualified man power

Political instability

Higher education in Nepal revolves almost solely around teaching, with relatively little focus on research.

a mismatch between the needs of the employment market and the courses available in many higher education institutions

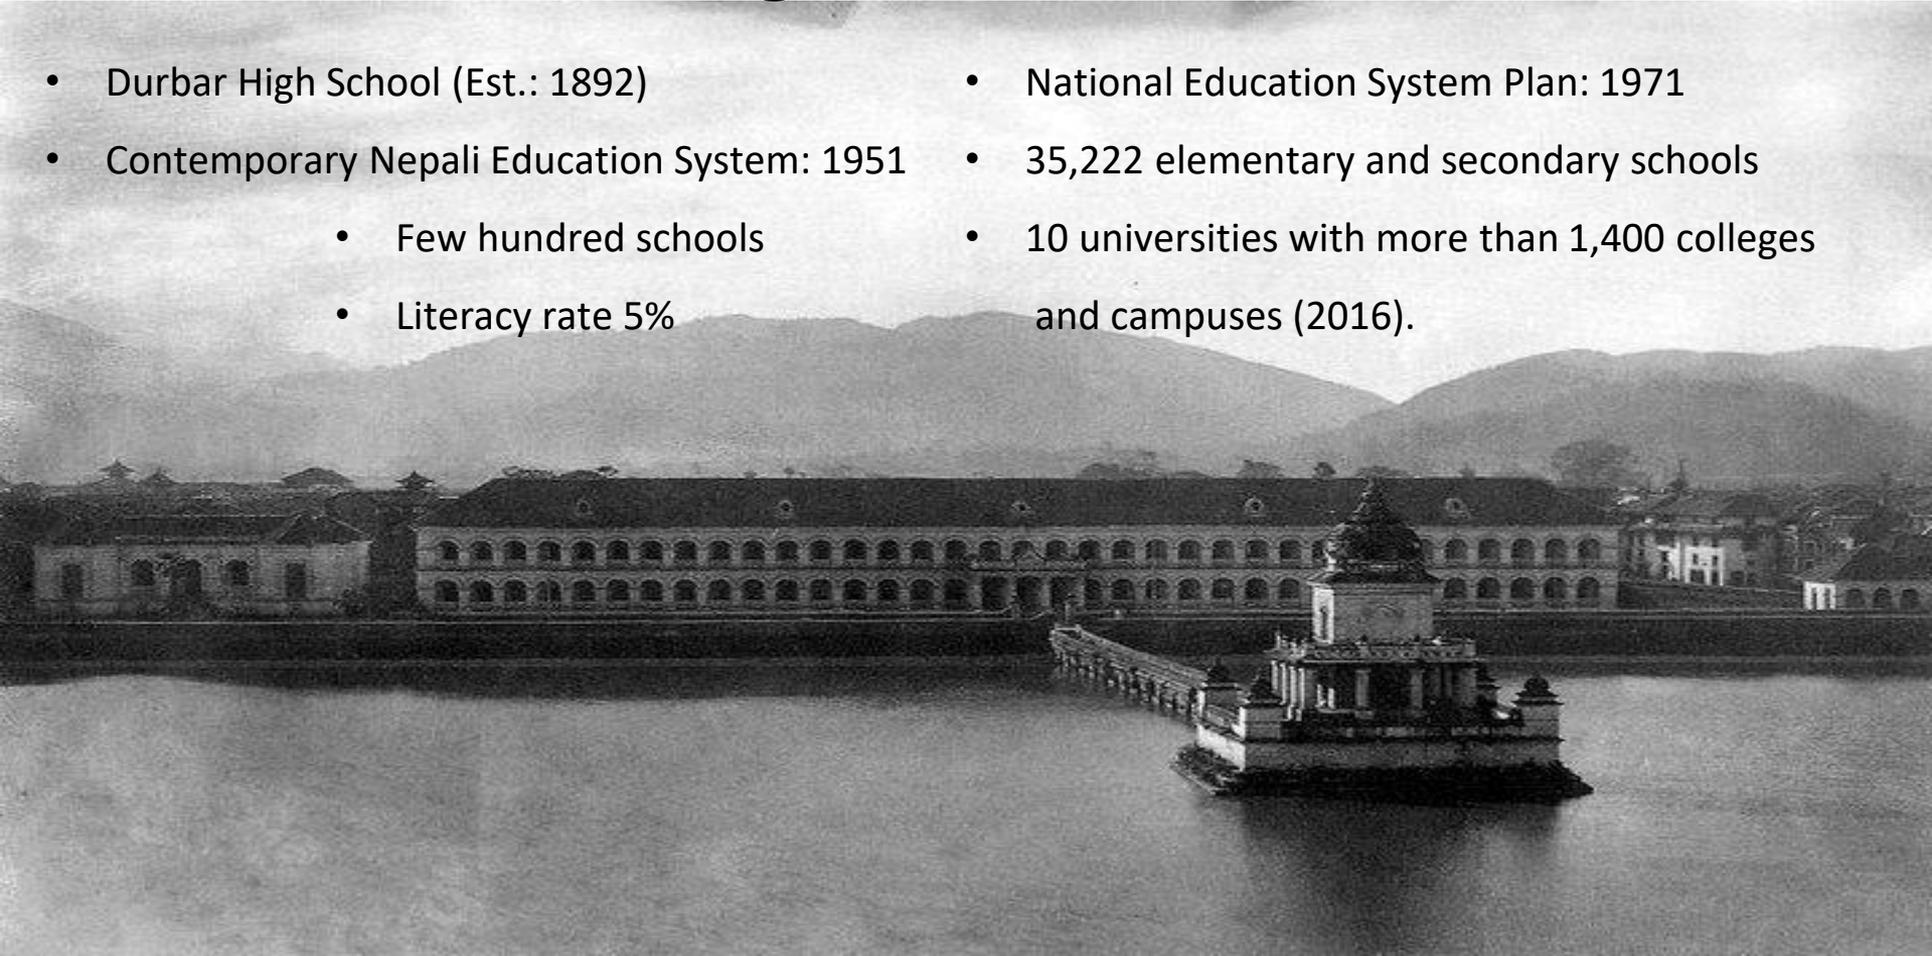

Inefficient educational management system and poor implementation of policies and programs etc.

Nepal is home to Tribhuvan University which in 2018 is the 10th most populated university in the world with 604,437 people in affiliation through colleges and linked institutes as well as main campuses.

High quantity - Low quality

Going back..

- Durbar High School (Est.: 1892)
- Contemporary Nepali Education System: 1951
 - Few hundred schools
 - Literacy rate 5%
- National Education System Plan: 1971
- 35,222 elementary and secondary schools
- 10 universities with more than 1,400 colleges and campuses (2016).

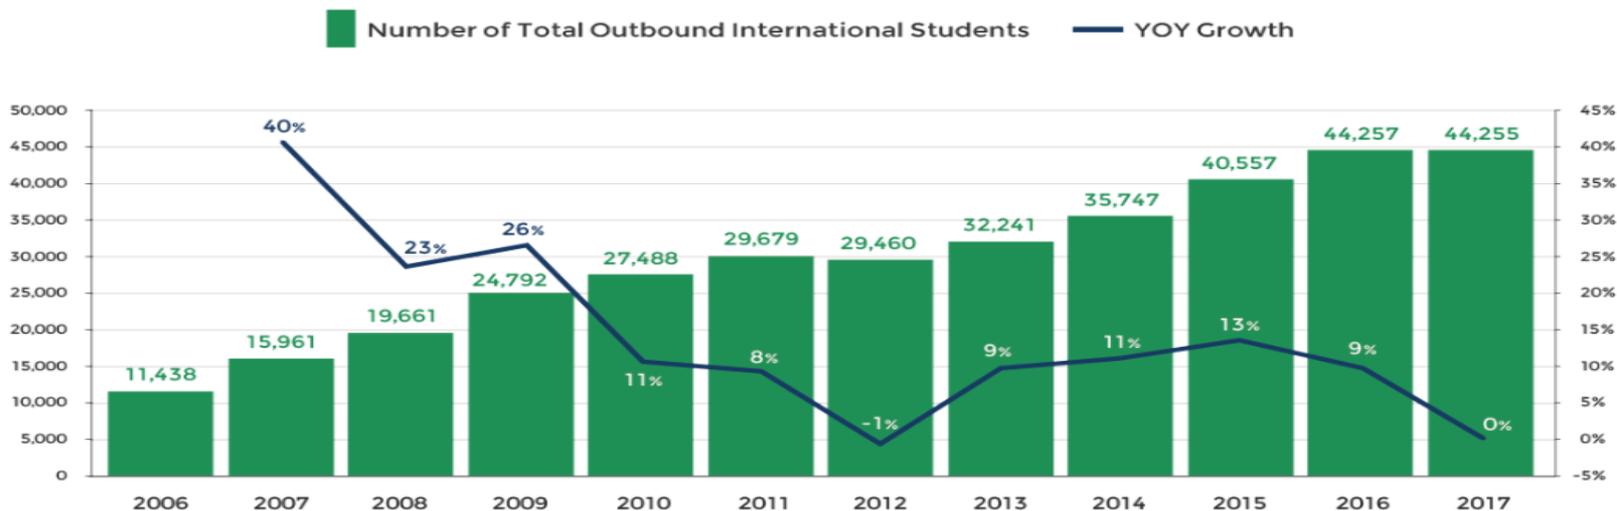

2016 School Sector Development Plan

Seeks to graduate Nepal

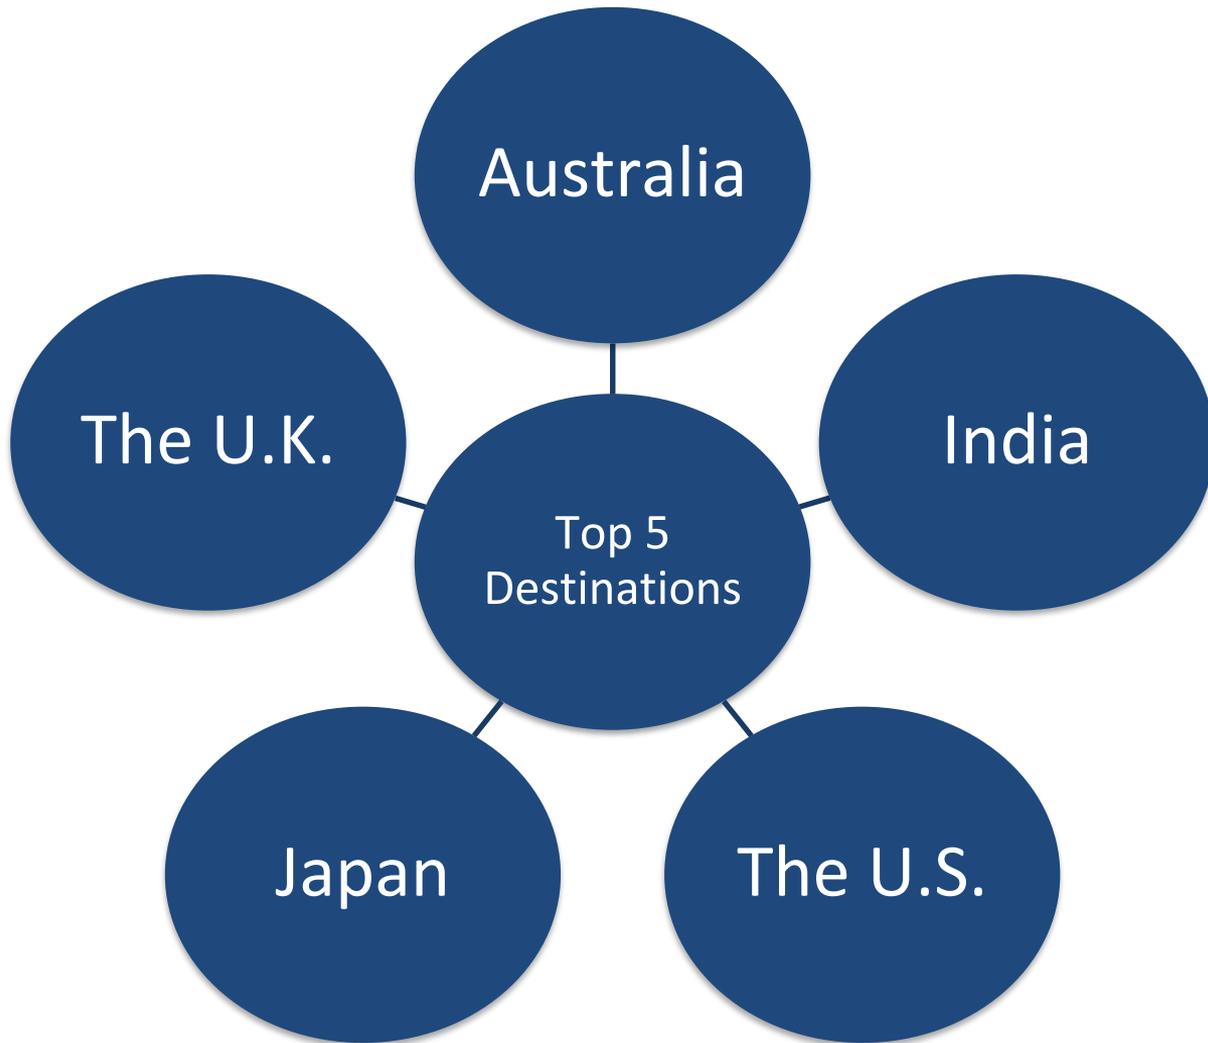

“from the status of least developed country by 2022 through strengthening access and quality of education”.

Total Number of International Degree-Seeking Students from Nepal, 2006-2017

Outbound Mobility Ratio (2016)	
Nepal	12.3%
Vietnam	3%
China	1.9%
India	0.9%

As per recent study it was noted that Nepal will be one of the top ten countries with the strongest growth rates in outbound mobility over the next decade along with countries like China, India, Pakistan, and Nigeria. The Council anticipates that the number of international Nepali students will increase by another 20,000 students by 2027.

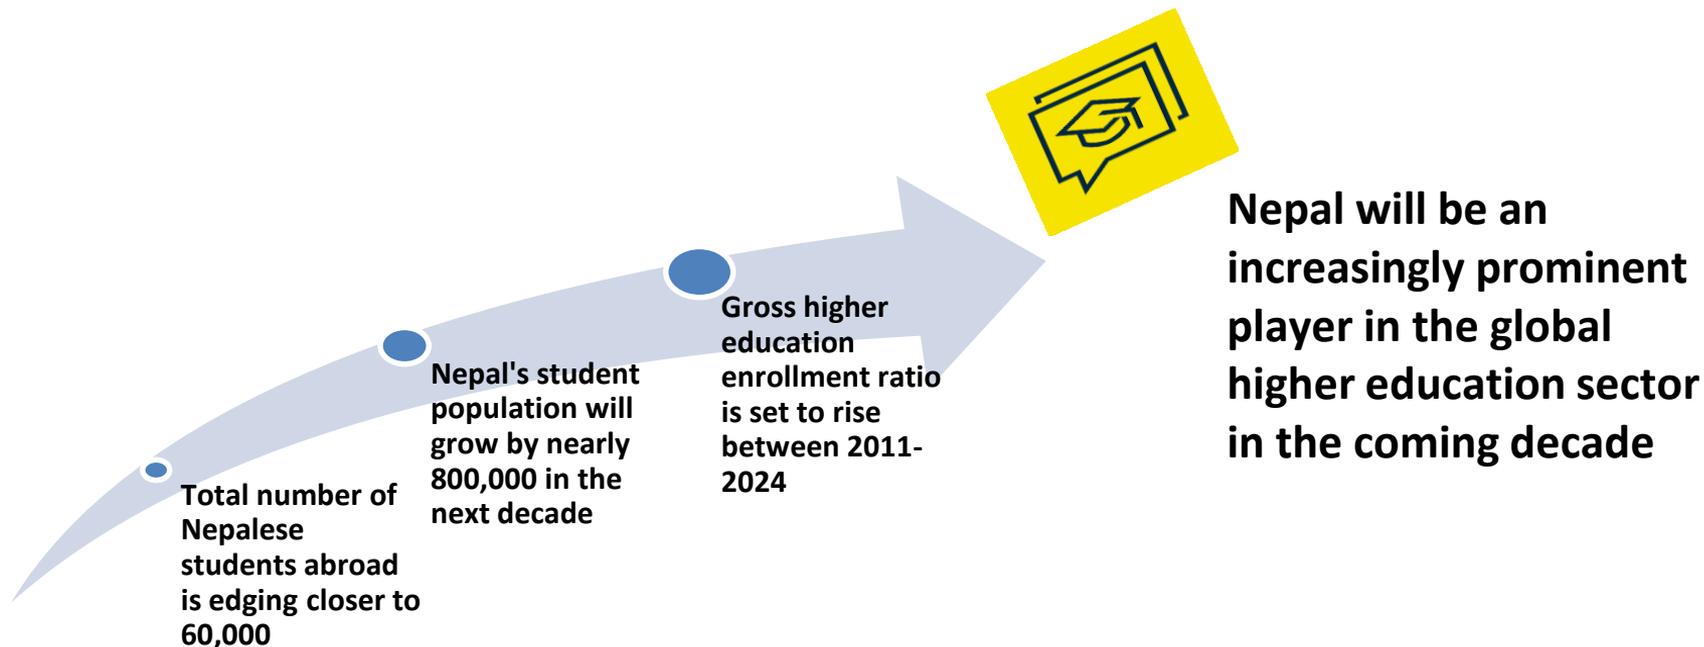

Nepalese In Australia

- 3rd Largest student source country after China and India.
- 5 % of the total international students in Australia (Nov 2017)

Australian Government Department of Education and Training

Factors like a high number of top-quality universities, simplified visa regulations and relatively low costs of study when compared to countries like the U.S. and the U.K. make it all but likely that Australia will continue to be a leading destination for Nepalese students in the future.

Demand for International Education expected to rise
